How did micromobility usage change in response to COVID-19? Haitao He – Lecture in Urban Mobility and Intelligent Transport

A digital tool to monitor temporal and spatial patterns of shared micromobility using vehicle availability data

Zhao, P., Haitao, H., Li, A., and Mansourian, A. (2020) Understanding temporal and spatial patterns of shared micromobility using vehicle availability data. Paper submitted to *Transportation Research Part D: Transport and Environment*

How did micromobility usage change in response to COVID-19

Li, A., Zhao, P., Haitao, H., Mansourian, A., and Axhausen, K.W. (2020) How did micro-mobility change in response to COVID-19 pandemic? A case study based on spatial-temporal-semantic analytics. Paper submitted to *Computers, Environment and Urban Systems*

Shared micromobility promotes sustainable mobility but also causes urban problems

Usage largely driven by unpredictable factors:

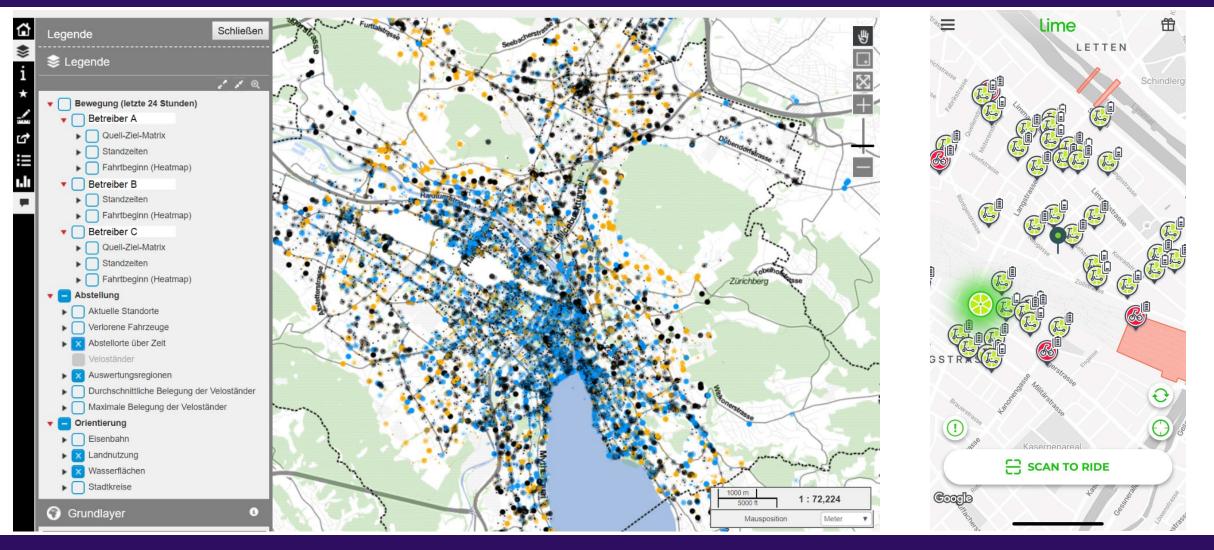

- volatile investment environment
- disruptive business models
- changing policies
- COVID-19

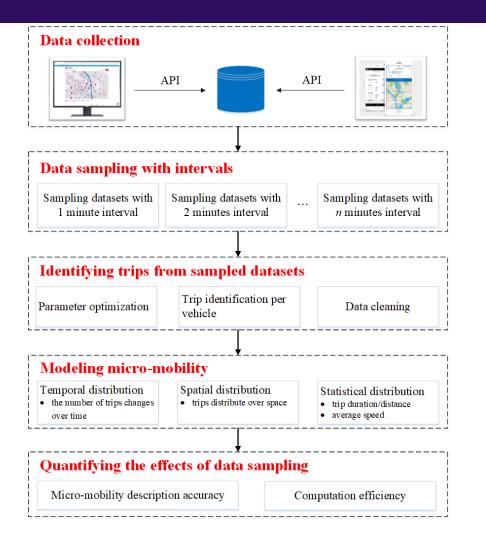

A tool for the regular monitoring and on-going understanding of micromobility usage

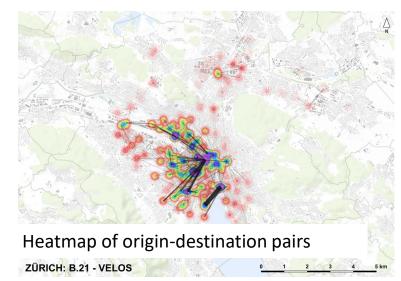

Loughborough University

Extract high-resolution disaggregate trip information from all service providers

Result:

Accurate high-resolution disaggregate trip information from all service providers

A digital tool to monitor temporal and spatial patterns of shared micromobility using vehicle availability data

Zhao, P., Haitao, H., Li, A., and Mansourian, A. (2020) Understanding temporal and spatial patterns of shared micromobility using vehicle availability data. Paper submitted to *Transportation Research Part D: Transport and Environment*

How did micromobility usage change in response to COVID-19

Li, A., Zhao, P., Haitao, H., Mansourian, A., and Axhausen, K.W. (2020) How did micro-mobility change in response to COVID-19 pandemic? A case study based on spatial-temporal-semantic analytics. Paper submitted to *Computers, Environment and Urban Systems*
