

arrive – Offers for Mobile People in the Greater Area of Munich

Support of the Project's Evaluation

Content of the Project

The project **arrive** is a further component of the cooperative traffic management in the region of Munich. The aim of **arrive** was to reach lasting and positive effects in the system of transportation. According to the spatiotemporal levels of the traffic management the project was divided into three work areas with the emphasis on

- strategic transportation planning,
- multimodal traffic information on the tactical level as well as
- operational traffic control.

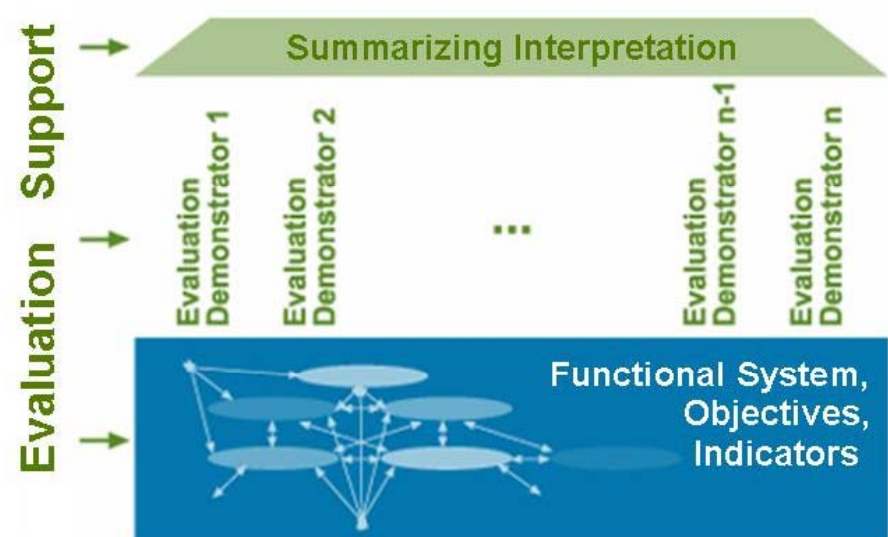

By means of a quality assurance concept the requirements and expectations were ensured in respect of the individual technical and planning measures and also in respect of the traffic management. In each work package demonstrators have been evaluated regarding to their reached and respectively attainable impacts.

Tasks of the Chair
